Risk - Market expectation

As derivative capital markets instruments, Structured Products change their risk-reward characteristics throughout their lifetime in conjunction with the changing market conditions. Our dynamic classification regarding risk and reward should help to illustrate these changes. The Value at Risk of the Structured Product serves as a risk measurement with a level of confidence of 90% over 30 days and a history of 500 days. The implied market expectation of the Structured Product will be signified through the help of the Global Delta.
