Product description

This Product offers the Investor on the Redemption Date the possibility to participate in a positive performance of the Underlying. In addition, the Investor will always receive an amount equal to the Denomination as long as the Underlying closes above the Strike Level on the Final Fixing Date. If, however, the Underlying closes below the Strike Level, the Investor will receive either a pre-defined number of Underlyings (i.e. Conversion Ratio) or, as the case may be, a Cash Settlement in the Settlement Currency, as described under "Redemption". Due to the buffer feature (Strike Level below Initial Fixing Level) the possible loss of this Product will always be smaller than with a direct investment.

Payoff assuming Early Redemption has NOT occurred:

Sensitivity

Structured Product	Delta	0.60
Swiss Market Index®		0.60

Delta is the rate of change of the price of a derivative with respect to the price of the underlying asset. If the Delta of the Underlying is 0.1, a 1% move in the Underlying means that the price of the Structured Product will change by 0.1%.

The table shows how your structured product price will be affected if your underlying basket price (reflecting an identical price change in each Underlying) changes by a certain percentage. All other parameters are assumed to stay equal.

Change in Underlying basket price	-10%	-5%	0%	+5%	+10%
New Product Price (in %)	94.93	99.08	102.51	104.96	106.57
Change in Product Price	-7.4%	-3.3%	0%	+2.4%	+4%

Structured Product	Vega	-0.22
Swiss Market Index®		-0.22

Vega is the rate of change of the price of a derivative with respect to the implied volatility of an Underlying. If the Vega of the Underlying is 0.1, a 1% move in the implied volatility of the Underlying means that the price of the Structured Product will change by 0.1%.

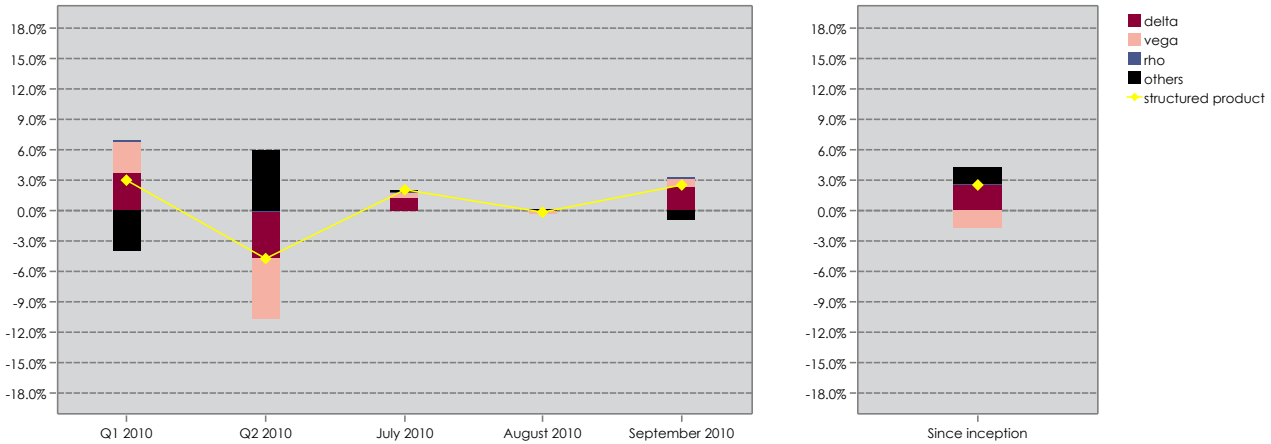

The table on the right shows how a change in the volatility of the underlying basket (reflecting an identical change in the volatility of each component of the basket) by a certain percentage will affect the price of the Structured Product while all other parameters are held equal.

Change in Underlying basket volatility	-10%	-5%	0%	+5%	+10%
New Product Price (in %)	102.91	102.72	102.51	102.31	102.10
Change in Product Price	+0.4%	+0.2%	0%	-0.2%	-0.4%

Combining the parameter shifts above, the table on the right shows the impact on the product price if the basket price and basket volatility shift simultaneously.
