Product description

This Product offers the Investor a Coupon Rate regardless of the performance of the Underlyings during lifetime whilst combined with a conditional downside protection. If no Barrier Event has occurred the Investor will receive the Denomination at the Redemption Date. If a Barrier Event has occurred but all Underlyings close above their Initial Fixing Level at the Final Fixing Date the Investor will still receive at the Redemption Date a Cash Settlement which equals the Denomination. Otherwise the Investor will receive at the Redemption Date either a round number (i.e. Conversion Ratio) of the Underlying with the Worst Performance or, as the case may be, a Cash Settlement in the Settlement Currency, as further described under Redemption.

VaR over time

Value at Risk (VaR) is the maximum loss not exceeded over a set time period at a given probability (confidence level). VaR calculation is based on extensive historical data. It is expressed as a percentage of the value of the product. The Calculation Agent determined this VaR classification, based on 99%, 10 days. It can differ from the SSPA classification.

Risik Class*	1	2	3	4	5	6
VaR Interval (in %)	0 < VaR ≤ 5	5 < VaR ≤ 15	15 < VaR ≤ 30	30 < VaR ≤ 39	39 < VaR ≤ 50	50 < VaR ≤ 100

Risk - Market expectation

As derivative capital markets instruments, Structured Products change their risk-reward characteristics throughout their lifetime in conjunction with the changing market conditions. Our dynamic classification regarding risk and reward should help to illustrate these changes. The Value at Risk of the Structured Product serves as a risk measurement with a level of confidence of 90% over 30 days and a history of 500 days. The implied market expectation of the Structured Product will be signified through the help of the Global Delta.
